Report Overview:

The global breath biopsy testing market refers to the market for diagnostic tests that analyze the volatile organic compounds (VOCs) present in a person's exhaled breath. Breath biopsy testing is a non-invasive and simple method for collecting and analyzing breath samples to detect and diagnose various diseases and conditions. A method to measure the chemical make-up of breath is referred to as Breath Biopsy Testing. The presence of different chemical compounds in the breath is diagnosed during the breath biopsy testing. Also, the exposure of hazardous substances can be detected with breath biopsy testing. Additional metabolism of drugs can also be analyzed with breath biopsy testing. Breath biopsy testing is based on the principle that the composition of exhaled breath contains unique metabolic and physiological information that can indicate the presence of certain diseases and abnormalities. The analysis of VOCs in breath samples can provide insight into conditions such as lung cancer, respiratory diseases, gastrointestinal disorders, liver and kidney diseases, and metabolic disorders like diabetes.

The Global Breath Biopsy Testing Market Size was estimated at USD 3306.96 million in 2023 and is projected to reach USD 4852.57 million by 2029, exhibiting a CAGR of 6.60% during the forecast period.
