Brewery Production Software is a comprehensive digital management system designed specifically for beer brewing. Its core focus is to achieve refined control over the entire process, from raw materials to finished product. The system deeply integrates with the brewing process, covering key links such as saccharification, fermentation, filtration, and filling. It ensures production stability and flavor consistency through real-time monitoring of equipment status, process parameters (such as temperature, pressure, and pH), and quality indicators. It offers specialized functions such as yeast strain lifecycle management, fermentation tank CIP cleaning scheduling, batch traceability, production scheduling, and material balance calculations. It seamlessly integrates with laboratory quality management systems (LIMS), equipment management, and enterprise resource planning (ERP) systems for data linkage.
