The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Brewing Malt Crusher competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Brewing Malt Crusher is used to crush the malt particles required for beer brewing into appropriate coarse and fine particles, with the purpose of keeping the malt husk intact and fully crushing the endosperm so as to better extract starch and enzymes during the saccharification process. Common malt crushing equipment includes roller mill and hammer mill, among which roller mill is widely used in the beer industry because of its good protection of malt structure. Global production in 2024 will be 34,000 units, with an average selling price of US\$24,000 per unit. (1) Market Overview Driven by the trend of personalized and diversified beer consumption, brewing malt grinding machines, as the starting equipment of the brewing process, are rapidly developing in the direction of "precision grinding, intelligent control, energy saving and environmental protection". It is expected that in the next 3-5 years, especially in the context of the rapid expansion of emerging markets and craft breweries in Asia, intelligent, miniaturized and high-cleanliness malt grinding equipment will continue to be popular. If companies can grasp the trend of equipment automation upgrades and smart factory construction, they will occupy a more advantageous position in the global malt processing equipment market. (2) Market Area Overview Benefiting from the promotion of craft beer culture, the popularization of miniaturized brewing equipment and the improvement of beer quality control requirements, the market share of mid-to-high-end malt grinding equipment with high grinding accuracy, automatic adjustment and low residual powder rate continues to expand. Especially in markets such as North America, Europe, China and South America, equipment procurement tends to be intelligent, energy-saving and integrated. (3) Overview of product types 1. Roller mill (accounting for

about 65%) uses a two-roller or four-roller structure to crush the malt by squeezing. The roller spacing can be adjusted according to different malt varieties to achieve the ideal crushing effect of fully crushing the endosperm while keeping the shell intact. It is widely used in industrial breweries and high-end craft brewing projects. 2. Hammer mill (accounting for about 25%) uses high-speed rotating hammers to crush the malt. It is suitable for small brewing scenarios with small production capacity and low requirements for particle uniformity, such as pub brewing and teaching platforms. It has a simple structure, easy maintenance and low cost. 3. Disc mill (accounting for about 10%, high-end market) integrates raw material weighing, feeding control, roller spacing adjustment, crushing monitoring, and automatic powder discharge. It is equipped with a PLC controller and HMI touch screen. It can be remotely controlled, store recipes and connect to the brewing MES system to achieve high-precision, high-efficiency and low-human intervention intelligent malt processing. (4) Technology Trends and Innovation Directions Intelligent adjustment and remote control (through the integration of PLC system and cloud platform, remote monitoring of roller gap, grinding efficiency and motor load can be achieved, supporting automatic shutdown protection and recipe management). Precision adjustable structure (introduction of high-precision ball screw system and digital adjustment mechanism to ensure precise control of roller gap and improve grinding consistency). Noise reduction and energy saving technology (optimization of motor drive system and vibration reduction structure to achieve low-noise operation and higher energy efficiency ratio, reducing operating costs). Modular integrated design (flexible connection of feeding and conveying, malt screening and wort filtration systems to facilitate the construction of integrated brewing lines). (5) Driving factors The core driving factors driving the growth of the brewing malt grinding machine market mainly include: the continuous growth of global craft beer consumption, which drives the demand for small and medium-sized brewing equipment; the brewing process puts higher requirements on grinding accuracy, wort quality and saccharification efficiency, prompting the equipment to upgrade to high performance and adjustable direction; at the same time, the acceleration of intelligent manufacturing and factory automation makes intelligent grinding systems with functions such as remote monitoring and recipe management more popular; in addition, environmental protection and energy-saving policies and the improvement of food safety standards also drive companies to invest in updating high-efficiency, low-noise and easy-to-clean equipment, thereby providing continuous momentum for the market.

The global Brewing Malt Crusher market size was estimated at USD 476.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
