Report Overview

A bridge is a structure built across a canyon, valley, road, railway, river, other body of water, or other obstacle. It is an elevated structure protruding from the water or ground to connect the road at the end and the end of the bridge. The purpose of a bridge is to allow people, vehicles, trains, or ships to cross an obstacle. The bridge can be built across the valley river or on both sides of the channel, or raised on the ground, the sill over the river or road below, so that the traffic below is unimpeded. Bridge design provides the basis for construction, which is to turn the structure in the design document into an entity through actual construction.
