### Report Overview

The briquette industry revolves around the production and distribution of compressed blocks of combustible biomass or coal dust, used primarily as a fuel source for heating and cooking. These briquettes are made from organic materials such as sawdust, agricultural residues, charcoal fines, or peat, bound together using natural or synthetic binders under high pressure. They serve as an efficient, cost-effective, and environmentally friendly alternative to traditional firewood or loose coal, offering higher energy density, lower emissions, and easier storage and transportation. The industry caters to residential, commercial, and industrial consumers, with increasing adoption in regions facing deforestation concerns or seeking sustainable energy solutions. Market dynamics are influenced by raw material availability, energy policies, environmental regulations, and the shift toward renewable energy sources.
