Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Brittle Material Cutting Machine competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global output of Brittle Material Cutting Machine will reach 9880 units, with an average selling price of US\$155,708 per unit. The Brittle Material Cutting Machine is a specialized device that utilizes a high-energy-density laser beam for non-contact cutting of transparent or brittle materials such as glass, sapphire, and ceramics. Its core principle is to focus the laser to form a micron-sized spot, rapidly heating the material locally to the vaporization point. The vapor then ejects, creating an incision. Compared to traditional mechanical cutting, this technology offers the following advantages: No mechanical stress: This prevents material breakage or crack propagation, making it particularly suitable for cutting ultra-thin glass (thickness
