Abstracts

The broadband polarizing beam splitter prism is an optical device that can split the incident light of any polarization state into two orthogonal polarization components and has a high extinction ratio and a wide operating wavelength range. It is made of two right-angle prisms bonded together. The inclined surface of one of the prisms is coated with multiple layers of interference film, allowing P-polarized light (polarized light parallel to the incident surface) to pass through, while S-polarized light (polarized light perpendicular to the incident surface) reflection. The application fields of broadband polarizing beam splitter prisms include laser technology, optical communications, optical measurement, etc. They can be used to achieve functions such as beam splitting, combining, modulation, isolation, and polarization conversion of light.

The global Broadband Polarizing Beam Splitter Prism market size was estimated at USD 85.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.
