Abstracts

Bronchiectasis therapeutics refers to the range of pharmaceutical and non-pharmaceutical interventions designed to manage and treat bronchiectasis, a chronic respiratory condition characterized by permanent, abnormal widening and damage to the bronchi, leading to mucus buildup, recurrent infections, and progressive lung function decline. These therapies aim to control symptoms, reduce exacerbation frequency, clear airway secretions, manage infections, and slow disease progression, encompassing antibiotics (including inhaled, oral, and intravenous formulations), mucoactive agents (such as hypertonic saline or dornase alfa), bronchodilators, anti-inflammatory medications, airway clearance techniques (like chest physiotherapy and devices), and in severe cases, surgical options or lung transplantation. The market is driven by increasing disease prevalence, growing awareness, advancements in diagnostic techniques, and a rising pipeline of novel therapeutics targeting underlying inflammation and infection mechanisms. Key players include pharmaceutical companies developing specialized antibiotics, mucolytics, and anti-inflammatory drugs, alongside medical device manufacturers offering innovative airway clearance technologies, all operating within a regulatory framework that emphasizes orphan drug designations and expedited pathways for rare respiratory diseases.

The global Bronchiectasis Therapeutic market size was estimated at USD 3075.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
