Abstracts

Bronchoscopy surgical robots represent a specialized segment within the medical robotics market, designed to assist physicians in performing minimally invasive diagnostic and therapeutic procedures within the bronchial airways and lungs. These systems typically integrate advanced imaging technologies, such as real-time video and electromagnetic navigation, with robotic-controlled catheters and tools, enhancing precision, stability, and dexterity during complex interventions like biopsies, stent placements, or tumor ablations. By enabling more accurate targeting of peripheral lung lesions and reducing operator fatigue, bronchoscopy robots aim to improve procedural outcomes, minimize complications, and expand the scope of interventional pulmonology, particularly in early lung cancer diagnosis and treatment.

The global Bronchoscopy Surgical Robot market size was estimated at USD 785.32 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 14.50% during the forecast period.
