Abstracts

Brown fused aluminum oxide (BFAO), also known as brown fused alumina or brown corundum, is a synthetic abrasive material produced by fusing bauxite in an electric arc furnace at high temperatures, resulting in a hard, tough, and blocky crystalline structure primarily composed of aluminum oxide (Al_2O_3) along with impurities such as titanium oxide and silica that contribute to its characteristic brown color and enhanced toughness compared to white fused alumina. It is widely utilized across industrial applications for abrasive blasting, grinding wheels, cutting discs, refractory materials, and surface preparation due to its durability, sharp edges, and cost-effectiveness, serving sectors including metalworking, construction, automotive, and aerospace where efficient material removal, surface finishing, or high-temperature resistance are required.

The global Brown Fused Aluminum Oxide market size was estimated at USD 650.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
