Abstracts

A brushless cordless dust extractor is an efficient cleaning device that combines a brushless motor with a cordless design to provide powerful suction and flexible use experience. Compared with traditional brushed motor dust extractors, brushless motors improve the durability, efficiency and stability of the device by reducing friction and wear, extending battery life, while reducing energy consumption and noise. The cordless design allows the device to be used without being restricted by the power cord, increasing the convenience and flexibility of operation, and is particularly suitable for work environments that require frequent movement, such as construction, decoration or workshop cleaning. This dust extractor is usually equipped with a large-capacity dust collection bucket, a HEPA filtration system and a variety of suction settings. It can efficiently clean dust, particulate matter and waste, ensure the cleanliness and air quality of the working environment, and is widely used in various industrial and household cleaning tasks.

The global Brushless Cordless Dust Extractor market size was estimated at USD 1327.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
