Report Overview

Brushless DC electric motor (BLDC motors, BL motors) also known as electronically commutated motors (ECMs, EC motors), or synchronous DC motors, are synchronous motors powered by DC electricity via an inverter or switching power supply which produces an AC electric current to drive each phase of the motor via a closed loop controller. The controller provides pulses of current to the motor windings that control the speed and torque of the motor. Brushless DC Motors are deployed in continuously operating applications such as pumps, fans and HVAC. Many of these are located in close proximity to the powertrain and therefore must be able to withstand high temperatures.
