Abstracts

Brushless DC motors run on direct current (DC) power source; the rotor is the core of brushless DC motors. Rotors are a set of synchronous motors that use permanent magnets rather than coiled winding. Brushless DC motors use a hall sensor or a rotor encoder along with a controller to identify the position and direction of the rotor to ensure a smooth operation. The light weight of Brushless DC Motors adds more value to their use and adoption. This is one of the aspects driving the global market. Another trend observed in this market is that many companies are focusing on higher efficiency and low energy consumption, which is possible with the help of Brushless DC Motors. Moreover, the increasing use of robots owing to increased automation requires these motors, accelerating their use even further. The attractiveness of these motors can be credited to their longer life cycle and high efficiency due to less weight.

The global Brushless DC Motors market size was estimated at USD 203.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
