The brushless die grinder is a high-precision equipment specially used for die surface treatment. It uses a brushless motor as the driving force and has higher stability and efficiency than traditional grinders. The brushless motor replaces the mechanical carbon brush through electronic control, avoiding the maintenance problems caused by carbon brush wear, thereby extending the life of the equipment while providing a more uniform and stable torque output. This grinder is suitable for surface grinding, polishing, deburring and other processes for metal molds, plastic molds and precision molds. It has the characteristics of high efficiency, low noise and easy operation. Brushless die grinders are widely used in fields that require high-precision processing, such as aerospace, automobile manufacturing, medical equipment and electronics industries, providing an important guarantee for improving product quality and production efficiency.

The global Brushless Die Grinder market size was estimated at USD 313.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
