Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Hedge Trimmer competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global hedge trimmer production reached approximately 960 K units, with an average global market price of around US\$ 350 per unit. Hedge trimmer is a kind of special garden machinery used for pruning trees, shrubs and hedges (hedges). Its core function is to replace the traditional manual scissors, efficient and tidy modeling and maintenance of plants. At present, driven by the advancement of urbanization, the improvement of greening standards and the increase of labor costs, the market demand for hedge trimmer continues to grow. Its basic demand comes from equipment renewal and efficiency improvement in traditional fields such as municipal gardens and residential property, while emerging growth points focus on the rise of household gardening consumption market and the expansion of greening maintenance demand around large-scale infrastructure (such as highways and new energy power stations). The core business opportunities under this background lie in two aspects: first, at the product end, lithium battery technology is accelerating the replacement of traditional gasoline engines, promoting cordless, environmentally friendly and low-noise products to become mainstream, and giving birth to more cost-effective domestic brand development space; The second is to transform the business model from single equipment sales to providing equipment leasing, intelligent operation and maintenance, and even overall greening maintenance solutions, so as to meet the core demands of various users for reducing costs and improving management efficiency, so as to develop a more sustainable profit model. The annual production capacity of a single hedge trimmer production line is typically 3,000-5,000 units per year, with a gross profit margin of around 28%. Downstream consumption of hedge trimmers is 75% commercial

and 25% residential. Market Concentration and Main Participants: From an international perspective, the market concentration of hedge machines is relatively high, mainly concentrated in developed countries such as Europe and America. For example, Bosch and Husqvarna and other large-scale manufacturers; from the domestic point of view, hedge machine manufacturers have Zhejiang Zhongjian Technology.

Manufacturing Processes and Market Trends: At present, the manufacturing process of hedge machines is quite mature, and its core lies in lightweight design and optimization of power system. The shell is mostly made of high-strength engineering plastics or die-casting aluminum alloy to reduce weight. The internal motor is generally made of brushless technology to improve efficiency and prolong life. The blade is usually made of high carbon steel through precision stamping and heat treatment to ensure sharpness and durability. The production process involves die-casting stamping injection molding and automatic assembly line to ensure the consistency and reliability of the product. In terms of market trends, cordless lithium battery products have occupied an absolute dominant position. Users' demand for portability and convenience continues to promote the upgrading of battery technology. Intelligent elements are gradually popularized, such as adding safety functions such as electronic brake load detection. Ergonomic design is increasingly valued to reduce user fatigue. In addition, the distinction between professional and household products is clearer. The overall market has maintained steady growth in the wave of electrification of gardening tools. Especially in mature markets such as Europe and North America, the demand for high performance and low noise products is particularly prominent.

The global Hedge Trimmer market size was estimated at USD 336.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.00% during the forecast period.
