Abstracts

Bt encapsulation materials refer to a class of protective polymer-based substances engineered to encase *Bacillus thuringiensis* (Bt), a naturally occurring soil bacterium widely used as a biological pesticide. These materials are designed to shield the Bt spores and toxins from environmental degradation?such as UV radiation, temperature fluctuations, and precipitation?while enabling controlled release upon application. The encapsulation process typically involves microencapsulation or other barrier-forming techniques that enhance the stability, shelf life, and efficacy of Bt-based biopesticides, making them more reliable and effective for agricultural and forestry applications compared to non-encapsulated formulations.

The global Bt Encapsulation Material market size was estimated at USD 85.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Bt Encapsulation Material market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
