## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Buck-Boost Battery Charger IC competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Buck-boost battery charger IC is a power management chip that integrates buck and boost functions and is used to stably charge the battery within a wide input voltage range. The global market size is about US\$1 billion in 2023 and is expected to grow to more than US\$1.1 billion in 2024, with a compound annual growth rate of about 10%. The price of a single IC ranges from about US\$0.2 for large-scale general-purpose products to US\$5 for high-integration high-end products with digital control and multiple outputs. Market opportunities mainly come from the needs of power tools, wearable devices and smart homes for long battery life, small size, and multi-platform adaptation, as well as the rapid expansion of energy storage systems and light electric vehicles for high-efficiency, high-power density charging solutions. Technology trends include the use of GaN devices and SiC processes to improve conversion efficiency and thermal performance, digitalization and adaptive algorithms to achieve precise battery management, and integrated wireless charging and battery health monitoring functions. Future directions will focus on wider input and output voltage ranges, higher integration (such as built-in MOSFETs and inductors), smaller package sizes, and smarter system-level power management.

The global Buck-Boost Battery Charger IC market size was estimated at USD 1003.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.10% during the forecast period.
