Abstracts

Build automation tools are software applications designed to automate repetitive, manual tasks involved in the process of compiling source code, packaging binaries, running tests, and deploying software, thereby improving efficiency, reducing human error, and standardizing development workflows across teams and environments. These tools, which include solutions like Jenkins, Gradle, Maven, and Azure DevOps, enable continuous integration and delivery (CI/CD) by orchestrating complex sequences of actions, managing dependencies, and providing visibility into build status and performance metrics.
