Abstracts

Building automation is the automatic centralized control of a building"s heating, ventilation and air conditioning, lighting and other systems through a building management system or building automation system (BAS). The objectives of building automation are improved occupant comfort, efficient operation of building systems, reduction in energy consumption and operating costs, and improved life cycle of utilities. Building automation is an example of a distributed control system – the computer networking of electronic devices designed to monitor and control the mechanical, security, fire and flood safety, lighting (especially emergency lighting), HVAC and humidity control and ventilation systems in a building.One driver in the market is growing need of building automation for enhancing business outcomes. Building automation deployed in industrial, residential, and commercial buildings can substantially improve the outcomes of business operations in terms of efficiency, productivity, and cost. In the light of these benefits, building automation has become an integral aspect of businesses these days. One trend in the market is integration of IoT in building automation system. Traditional buildings are controlled manually, which entails high lead time and operational cost. Similarly, the existing intra-networking between devices suffers from huge disadvantages of limited connectivity due to complex wired or slow wireless technology.

The global Building Automation Software market size was estimated at USD 56960.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.40% during the forecast period.
