Abstracts

Building cladding panels are non-structural external facade systems used to enclose and protect buildings while enhancing their aesthetic appeal, thermal performance, and weather resistance. These panels can be made from a variety of materials?such as metal (aluminum, steel, copper), composite materials (aluminum composite material or ACM panels), fiber cement, terracotta, high-pressure laminates, or wood?and are designed for ease of installation, durability, and design flexibility. They serve both functional roles, including insulation, moisture control, and fire resistance, and architectural roles, allowing for creative expression through textures, colors, and profiles. Cladding systems can be installed using methods such as rainscreen principles to improve ventilation and longevity, or as direct-applied systems, and are commonly used in commercial, industrial, institutional, and high-end residential construction.
