Abstracts

Building Design and Building Information Modeling (BIM) Software is a type of software that enables architects, engineers, contractors, and other professionals to design, construct, and manage buildings and infrastructures using a model-based process. BIM software goes beyond traditional 2D or 3D CAD software by creating a digital representation of the physical and functional properties of a facility, such as its geometry, materials, systems, and performance. BIM software also allows for collaboration and coordination among multiple stakeholders throughout the project lifecycle, from planning and design to construction and operation. The industry trend of Building Design and Building Information Modeling (BIM) Software is expected to be positive and growing in the future. The main drivers for this growth are the increasing adoption of IoT technology in building design and construction, the digital transformation in emerging markets such as Asia Pacific, the rising demand for data-driven insights and optimization, and the need for efficient information retrieval and utilization. Additionally, the emergence of new innovative software that leverages artificial intelligence, natural language processing, machine learning, and augmented reality to provide smarter and faster BIM is likely to augment the market growth.

The global Building Design and Building Information Modeling (BIM) Software market size was estimated at USD 4028.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.00% during the forecast period.
