## Abstracts

Building film materials, also known as construction films or construction membranes, are specialized polymer-based sheets used extensively in the construction industry for moisture control, air and vapor barriers, temporary weather protection, concrete curing, and safety applications such as window protection during building works. These materials are typically manufactured from polyethylene, polypropylene, PVC, or other engineered polymers and are valued for their durability, flexibility, resistance to environmental factors, and ease of installation. The market is driven by growth in global construction activities, increased focus on energy-efficient building envelopes, stringent building codes requiring enhanced moisture management, and rising demand for temporary protective solutions in both residential and commercial projects. Key segments include vapor barriers, underlayment films, housewrap, and protective films, with innovations leaning toward eco-friendly, recyclable materials and smart films with added functionalities like UV resistance or antimicrobial properties. Regional demand is strongly influenced by climate-specific requirements and the pace of urbanization, particularly in emerging economies.

The global Building Film Materials market size was estimated at USD 25345.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
