Report Overview

This market research analysis identifies the emergence of new business models as one of the key factors behind the growth of the market. Utilities is a highly-regulated sector that is currently undergoing restructuring and the economies are studying new mechanisms to promote the development and use of renewable energy technologies. More private bodies are participating in utility power generation and distribution. The authorities monitor the profit margin and cost of debt and equity financing in exchange for granting the rights to sell electricity within a given service region or territory. By entering new business models such as the competitive distributed generation model, these utility companies are seeking a revenue stream to offset low returns from traditional utility projects.

The market research report identifies the rising popularity of community solar gardens as one of the key trends behind the growth of the building-integrated photovoltaic skylights market. The community solar garden or CSG is shared by two or more subscribers that can be renters, homeowners, businesses, condo owners, schools, and government buildings. CSGs are gaining popularity as they require less investments to be made on energy and allow a group of renters, homeowners, condo dwellers, and businesses to share the benefits of a single solar installation. CSGs reduce the cost of availing solar energy and provides substantial reserve for use.
