Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Building Integrated Photovoltaics (BIPV) Glass competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Building Integrated Photovoltaics (BIPV) Glass production reached approximately 11,600 k sqm with an average global market price of around US\$ 150 per sqm, a single-line production capacity of approximately 50,000 sqm/year, and a gross profit margin of approximately 10%-40%. Building Integrated Photovoltaics (BIPV) Glass refers to a type of architectural glass that integrates photovoltaic (PV) power-generation technology into building envelope components, allowing the glass to function simultaneously as a structural or decorative element and an energy-producing surface. Unlike traditional add-on solar panels, BIPV glass becomes part of the building's facade, roof, skylights, or shading systems, replacing conventional construction materials while converting sunlight into electricity. It typically incorporates crystalline silicon or thin-film solar cells, which are laminated or embedded between glass layers, and may be manufactured in transparent, semi-transparent, or opaque forms to meet aesthetic, daylighting, and thermal-insulation requirements. BIPV glass supports sustainable architecture by improving building energy efficiency, reducing carbon emissions, and contributing to energy self-sufficiency, making it widely used in green buildings, smart cities, and modern architectural applications. It is expected that global demand for photovoltaic products will remain high in the next few years. According to our PV & Solar Research Center, by the end of 2022, the global cumulative installed photovoltaic power generation capacity is about 1180 GW. According to the data of China Photovoltaic Industry Association, the global newly installed photovoltaic capacity in 2022 is about 230 GW, and this number in 2023 is predicted to be 280-330 GW. According to the data of the Ministry of Industry and

Information Technology, the total output value of China's photovoltaic industry exceeded 1.4 trillion yuan in 2022. From the perspective of production value, mainland China is still the global center of the PV industry. According to the International Energy Agency, China market share in all key products of the supply chain have exceeded 80%. Among them, the production capacity of silicon wafers, solar cells, and components accounts for as high as 98%, 85% and 77%, respectively. According to the data released by the European Photovoltaic Association, 27 EU countries gained a new PV installed capacity of 41.4 GW in 2022. According to the report of the US Solar Energy Industries Association (SEIA), the US held a new PV installed capacity of less than 19 GW in 2022. But it is estimated that from 2023, the average annual growth rate of new photovoltaic installed capacity will exceed 21%. In terms of Japan, based on data from Fitch and the US Energy Information Administration (EIA), in 2022, Japan's newly installed photovoltaic capacity was 3.157 GW.

The global Building Integrated Photovoltaics (BIPV) Glass market size was estimated at USD 1741.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
