Report Overview

Building integrated photovoltaics (BIPV) are photovoltaic materials that are used to replace conventional building materials in parts of the building envelope such as the roof, skylights, or facades. They are increasingly being incorporated into the construction of new buildings as a principal or ancillary source of electrical power, although existing buildings may be retrofitted with similar technology. The advantage of integrated photovoltaics over more common non-integrated systems is that the initial cost can be offset by reducing the amount spent on building materials and labor that would normally be used to construct the part of the building that the BIPV modules replace. These advantages make BIPV one of the fastest growing segments of the photovoltaic industry.

The global Building Integrated Photovoltaics (BIPV) market size was estimated at USD 8019 million in 2023 and is projected to reach USD 11217.51 million by 2032, exhibiting a CAGR of 3.80% during the forecast period.

North America Building Integrated Photovoltaics (BIPV) market size was estimated at USD 2227.86 million in 2023, at a CAGR of 3.26% during the forecast period of 2024 through 2032.
