Abstracts

Building long rolled steel refers to a specific category of ferrous metal products manufactured through hot-rolling processes, characterized by their extended length and uniform cross-sectional profiles such as beams, channels, angles, rails, or bars. These products are primarily used in construction, infrastructure, heavy machinery, and industrial applications due to their structural integrity, load-bearing capacity, and versatility. The manufacturing process involves reheating semi-finished steel (billets, blooms, or slabs) to high temperatures and passing them through a series of rollers to achieve the desired shape and dimensions, followed by cooling and cutting to specified lengths. Key properties include high strength, ductility, and weldability, making them essential for frameworks, supports, bridges, and other engineered structures requiring durability and resilience under stress.

The global Building Long Rolled Steel market size was estimated at USD 180000.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
