Abstracts

Built-in air conditioners, also known as ducted or central air conditioning systems, are integrated climate control solutions designed to cool entire buildings or large spaces through a network of ducts and vents connected to a central unit, typically installed in ceilings, under floors, or within walls. These systems consist of an outdoor compressor/condenser and an indoor air handler, distributing conditioned air uniformly across multiple rooms via concealed ductwork, offering a seamless and aesthetically unobtrusive alternative to standalone units. They are commonly used in residential, commercial, and institutional settings for their efficiency in maintaining consistent temperatures, quiet operation, and ability to incorporate advanced features like zoning, air purification, and smart thermostat integration.

The global Built In Air Conditioner market size was estimated at USD 42230.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.85% during the forecast period.
