Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Bulk Continuous Filament Yarn competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. BCF yarn is also called continuous bulked filament yarn, and is mainly used in various carpets downstream. BCF yarn is made through specific production processes, such as spinning (the melt is sprayed through the spinneret to form filaments.), stretching and deformation (stretching and deforming the filaments to give them a curled shape and the required physical properties.), winding (winding the deformed yarn into a specified shape and length.) and other steps. Carpet yarn mainly refers to nylon yarn, polypropylene yarn, and polyester yarn used to make carpets. This article mainly counts BCF carpet yarn. In terms of price, polyester yarn has a greater advantage, followed by polypropylene, while nylon is still the most expensive. Among them, the main advantages of polyester BCF yarn are durability, stain resistance, and favorable prices. It is often used in residential and commercial carpets. Polyester yarn carpets are valued for their softness, elasticity, and ability to maintain their appearance for a long time. In addition, PET yarn is environmentally friendly because it can be made from recycled materials, making it a sustainable choice for carpet manufacturing. The fundamental difference between BCF yarn and ordinary yarn lies in the fineness range, and most BCF is around 700-4000D. In terms of the share of BCF yarn types, there are obvious differences among regions around the world. The polyester BCF yarn (mainstream) in the Chinese market and the nylon camp dominated by Europe and the United States reflect two completely different business logics. In China, polyester has rapidly occupied the commercial and residential carpet market with its cost advantage of 30%-40% lower than nylon and technological breakthroughs in the touch of simulated silk. This "price-performance priority" strategy resonates with China's huge

infrastructure and real estate demand. In contrast, in Europe and the United States, nylon BCF yarn still occupies a high-end market with its performance advantages such as wear resistance and resilience. Taking Belgium's BIG Yarns as an example, although its new polyester BCF production line put into production in 2024 is aimed at the automotive carpet field, its core production capacity is still anchored in the nylon track—behind this is the European market's ultimate pursuit of material life (nylon carpets have a service life of up to 10 years, polyester only 5-7 years) and sustainability. It is worth noting that the Italian giant Aquafil Group has successfully built a technical barrier in the luxury brand carpet market through ECONYL recycled nylon technology, with a per-ton premium of up to 200% of ordinary nylon. The high concentration of the global BCF yarn market (the top 5 companies account for more than 60%) is actually a competition of vertical integration capabilities in the industrial chain. European companies such as Aquafil's ECONYL recycling system has recycled more than 100,000 tons of nylon waste, directly binding customers such as IKEA and Mercedes-Benz; while Asian players rely on large-scale manufacturing + cost control to seize the low-end market. Japanese and Korean companies such as Toray and Hyosung have reduced production costs to 70% of their European counterparts by deploying polyester BCF production bases in low-cost countries such as Southeast Asia, and have occupied a certain market share in the landscape dominated by European and American companies. The biggest variable in the future of BCF carpet yarn is the dual drive of lightweight automobiles and carbon neutrality. The commissioning of BIG Yarns' polyester automotive carpet production line marks a loosening of the traditional nylon-dominated automotive interior market - polyester is penetrating into the supply chain of electric vehicles such as Tesla and BYD with its 15% weight reduction and improved stain resistance. At the same time, the EU's Circular Economy Action Plan requires a carpet recycling rate of 60% by 2030, which will create a tens-billion-level incremental space for recycled nylon BCF.

The global Bulk Continuous Filament Yarn market size was estimated at USD 1592.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.00% during the forecast period.
