## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Bull Head Full Servo Manipulator competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The bull-head full-servo manipulator is a high-speed, high-precision automatic removal device designed for large injection molding machines (generally over 400 tons). Its name comes from its unique "bull-head" structure: the upper and lower arms and the horizontal structure are arranged at the front end of the main beam, the two arms are driven independently, the motor is placed on the top, and the cable is built-in, with a forward extension shape similar to the appearance of a bull's head. Compared with traditional single-arm or double-section manipulators, this structure has greater rigidity, more stable inertia control, and longer effective vertical travel, and is particularly suitable for automatic removal scenarios of deep-cavity, heavy-load, and multi-cavity complex mold products.

The global Bull Head Full Servo Manipulator market size was estimated at USD 93.8 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
