A buret is a glassware that can measure the volume of liquid dropped by dropping a small amount of liquid while operating it with a cock. A removable cock is attached to the bottom of a thin, tubular glass tube with a scale on it, and the amount of liquid dropped is adjusted by turning the cock. A pipette can also be used to measure the volume of a dropped liquid, but the buret can be used in a vertical position, so the scale can be read more precisely and the amount of liquid can be adjusted finely with the cock. Moreover, since the volume of a drop can be precisely controlled with a cock, the buret is suitable for experiments that require accurate liquid volume measurement, such as neutralization titration.
