## Abstracts

Buried Obstruction Survey is a specialized geophysical investigation aimed at detecting, locating, and mapping hidden subsurface obstacles such as buried tanks, foundations, pipelines, cables, voids, and debris that may pose risks during excavation, construction, or maintenance activities. Utilizing advanced technologies like Ground-Penetrating Radar (GPR), electromagnetic induction, magnetic surveys, and acoustic methods, these surveys provide non-invasive, accurate information about underground conditions without the need for disruptive digging. The primary purpose is to identify potential hazards and obstructions early in project planning to ensure worker safety, prevent damage to existing infrastructure, reduce costly delays, and comply with regulatory requirements. By producing detailed maps and reports of subsurface features, buried obstruction surveys support informed decision-making across construction, utility management, environmental remediation, and infrastructure development projects.

The global Buried Obstruction Survey market size was estimated at USD 1850.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.70% during the forecast period.
