Abstracts

The bus type motion controller is a centralized control system that integrates motion control functions, such as trajectory planning, servo drive command generation, and I/O management, into a single unit that communicates with motors, drives, and peripheral devices over a high-speed industrial network bus?such as EtherCAT, PROFINET, CANopen, or POWERLINK?rather than through individual point-to-point wiring. This architecture enables synchronized, real-time control of multiple axes with reduced cabling complexity, enhanced diagnostic capabilities, and greater scalability, making it particularly suitable for applications in industrial automation, robotics, CNC machinery, packaging systems, and other high-precision, multi-axis motion control environments where performance, flexibility, and integration with higher-level automation systems are critical.

The global Bus Type Motion Controller market size was estimated at USD 720.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
