Abstracts

A Busbar Free (0Bb) Module is a specialized type of solar photovoltaic module designed without the conventional busbars?metallic strips typically used to collect and conduct electrical current from the solar cells. By eliminating these physical busbars, the module reduces shading and resistive losses on the cell surface, which can lead to higher energy conversion efficiency and improved performance under various light conditions. This design often employs advanced interconnection technologies, such as multi-wire or conductive adhesive approaches, to maintain electrical connectivity while minimizing optical and electrical obstructions. The absence of busbars also contributes to a more uniform aesthetic appearance and may enhance the module's resistance to micro-cracking and potential-induced degradation, making it an innovative solution in the pursuit of more efficient and durable solar energy systems.

The global Busbar Free (0Bb) Module market size was estimated at USD 131.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.15% during the forecast period.
