Abstracts

Business cloud storage refers to a service model where organizations store, manage, and access their digital data—including documents, media, databases, and application files—on remote servers maintained and secured by a third-party provider, accessible via the internet from any location or device. These solutions are designed to support collaboration, scalability, and data recovery, typically offering features such as file synchronization, version control, granular access permissions, and integration with productivity and enterprise software. Unlike consumer-focused cloud storage, business-grade services emphasize security compliance (e.g., GDPR, HIPAA), administrative controls, audit trails, and service-level agreements (SLAs) guaranteeing uptime and support, making them essential for operational continuity and digital transformation in modern enterprises.

The global Business Cloud Storage market size was estimated at USD 12400.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 15.20% during the forecast period.
