Abstracts

Business Continuity Management Program Solutions (BCMP) are software applications or sets of applications that help organizations plan, manage and execute their business continuity and disaster recovery strategies. BCMP solutions enable organizations to assess their availability risks, conduct business impact analysis, map their business processes and dependencies, create and maintain recovery plans, test and exercise their plans, and manage crisis situations. BCMP solutions also provide metrics and analysis to measure and improve the effectiveness and maturity of the business continuity management program. The industry trend of BCMP solutions is expected to be positive and growing in the coming years. The main drivers for this growth are the increasing demand for business resilience in the wake of the COVID-19 pandemic, the rising complexity and diversity of business environments, the evolving regulatory and compliance requirements, and the emergence of new technologies such as artificial intelligence (AI), machine learning (ML), and blockchain. The main challenges for this market are the lack of awareness and skills among BCMP users, the high cost and complexity of BCMP solutions, and the dynamic nature of cyber threats. The main opportunities for this market are the increasing adoption of cloud-based and hybrid BCMP solutions, the integration of BCMP with other enterprise risk management systems, and the growing demand for BCMP solutions in emerging markets such as Asia-Pacific and Latin America.

The global Business Continuity Management Program Solutions market size was estimated at USD 1683.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
