Report Overview

Butterfly dampers are used to restrict the flow of materials in ducting systems where flow control and low leakage isolation are a priority. These dampers are especially useful in applications such as incinerators, balancing systems, control air systems, stack isolation, and scrubber systems. Butterfly dampers function best in round ducts, as their central pivot point allows them to maintain a tight, continuous seal around the damper's circumference. Various types of seals can be used with butterfly dampers to offer better isolation and sealing potential. The best type of seal to use will also depend on the kind of gas being fed through the ductwork.
