Abstracts

The C5 complement inhibitor market represents a specialized segment within the biopharmaceutical industry focused on therapies that selectively block the complement protein C5, a key component of the innate immune system's complement cascade. These inhibitors, which include monoclonal antibodies and other biologics, are designed to modulate overactive complement activity implicated in a range of rare and severe disorders, such as paroxysmal nocturnal hemoglobinuria (PNH), atypical hemolytic uremic syndrome (aHUS), and generalized myasthenia gravis (gMG). By interrupting the formation of the membrane attack complex (MAC) and preventing downstream inflammatory and cytolytic effects, C5 inhibitors offer targeted mechanisms to control disease progression, reduce hemolysis, and improve clinical outcomes. The market is characterized by high innovation, significant research and development investment, and a focus on addressing unmet medical needs in niche patient populations, with regulatory approvals often granted under orphan drug designations due to the rarity of the conditions treated.

The global C5 Complement Inhibitor market size was estimated at USD 365.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.45% during the forecast period.
