## Abstracts

A C8 HPLC Column is a type of reversed-phase high-performance liquid chromatography (HPLC) column that features an octylsilane (C8) stationary phase. It's similar in functionality to the C18 HPLC column, though it is less hydrophobic due to the shorter C8 carbon chains attached to the silica particles. This difference results in slightly weaker retention of nonpolar compounds compared to C18 columns, making C8 columns ideal for analytes that are too retained or interact too strongly with C18 phases.

The global C8 HPLC Column market size was estimated at USD 299.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global C8 HPLC Column market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
