The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Cable Bead Wire competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Cable Bead Wire production will reach 225,600 tons, with an average selling price of US\$900 per ton. Bead wire is an essential metal reinforcement for the tire bead area of various motor and non-motor vehicles, as well as aircraft tires. It is a steel wire embedded in the edge of the rubber tire and is also known as tire bead wire. Based on its comprehensive mechanical properties, bead wire can be broadly classified into standard tensile strength (1770-2000 MPa), high-strength (above 2200 MPa), and high-elongation (3%-10%) types. The torsional deformation resistance rating is specified, and common coatings are pure copper and tin bronze. Cable bead wire consists of a core steel wire with a spirally wound outer layer. Compared to traditional bead wire, it offers several advantages, including lighter weight, higher unit strength, improved tire uniformity, and better rolling resistance. It is primarily used in high-performance passenger car tires, aircraft tires, and demanding truck tires. Compared to traditional bead wire, cable bead wire offers more uniform stress distribution across the bead cross section, a more stable structure, superior impact resistance, and improved rolling resistance. Cable Bead Wire has 3-5 times better performance than ordinary tire bead wire products. Its lighter, stronger and more stable characteristics can provide tires with better performance.

The global Cable Bead Wire market size was estimated at USD 203.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
