Report Overview

A cable extension transducer is a type of position sensor. Cable extension transducers are known by different names, these include; draw-wire sensor, string pot, yo-yo pot or string encoders. Cable extension transducers use a spring-loaded spool and a retractable cable to measure position. This is an alternative way of measuring linear displacement than a more common linear position sensor. The spool and cable enable the cable extension transducer to measure large displacements whilst only requiring a small amount of space.
