A CMTS is an equipment that is generally located at the headend or hub site of the cable company. It is used to provide high-speed data services such as cable internet or voice over internet protocol (VoIP) to cable subscribers. A CMTS can be divided into two different architectures, namely integrated CMTS (I-CMTS) or modular CMTS (M-CMTS). In an I-CMTS architecture, all components are housed in a single chassis. In an M-CMTS solution, the architecture is broken up into different components. Research analysis on the global CMTS market identifies the growth in customer demand for cable network-based unified services due to the increasing customer connection to a core network based on IP technology to be one of the major factors for this market's growth. These access networks can connect customers through Wi-Fi and 3G or 4G network. The demand for mobile services and data usage witnessed a faster growth in the recent years and the demand for broadband service from enterprise sector will also considerably increase in the coming years.
