## Abstracts

A cable protection system for marine engineering is a comprehensive set of devices. Its core function is to safeguard cables from various potential damages and ensure their stable operation, such as limiting excessive cable bending, preventing abrasion, and resisting external corrosion. This system features a diverse range of components, including bend restrictors, anti - bending devices, cable sleeves, and anti - abrasion protection sheaths. These components work together to provide all - around protection. Technically, the system must possess excellent mechanical properties and environmental resistance. For example, bend restrictors need to precisely control the bending radius, and protection sheaths should have high abrasion resistance and corrosion resistance.
