Abstracts

Cable ramps and protectors are devices specifically designed to protect cables from physical damage. When cables need to cross ground obstacles or be laid between different heights, cable ramps provide a smooth transition path to ensure that the cables are not damaged due to excessive bending. Meanwhile, cable protectors are typically used to cover and secure laid cables, preventing them from being crushed by vehicles, stepped on by personnel, or damaged by other external forces. These products are widely used in various occasions such as data centers, computer rooms, factory workshops, construction sites, etc., and are important auxiliary equipment for ensuring cable safety and extending cable service life.
