Abstracts

The Caco-2 permeability assay is an in vitro model widely used in pharmaceutical and biotechnology research to predict the intestinal absorption and permeability of orally administered drug compounds, utilizing a human colon adenocarcinoma cell line (Caco-2) that spontaneously differentiates into a monolayer resembling the small intestinal epithelium. This assay evaluates key parameters such as apparent permeability coefficient (Papp), efflux ratios via transporters like P-glycoprotein, and passive transcellular or paracellular transport, serving as a critical tool in early drug discovery for screening compound libraries, assessing bioavailability, and guiding structure-activity relationships to prioritize candidates with favorable absorption profiles while reducing reliance on animal testing.

The global Caco 2 Permeability Assay market size was estimated at USD 85.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Caco 2 Permeability Assay market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
