Abstracts

Cadmium bearing silver solder is an alloy solder with silver as the main component and a certain amount of cadmium. The addition of cadmium gives this solder unique physical and chemical properties, which makes it exhibit good fluidity and wettability during the welding process, and can easily fill the welding gap to form a tight and high-strength welding joint. In addition, cadmium-bearing silver solder also has high corrosion resistance and oxidation resistance, and can maintain the stability and durability of the welding joint in harsh environments. However, it should be noted that since cadmium is toxic to the human body and the environment, it is necessary to strictly abide by the relevant safety operating procedures when using cadmium-bearing silver solder to ensure the safety of operators and environmental protection.

The global Cadmium Bearing Silver Solder market size was estimated at USD 867.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.10% during the forecast period.
