The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Caffeine Anhydrous Powder competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Caffeine anhydrous powder is a highly purified caffeine raw material processed to remove crystalline water, featuring efficiency, stability, and ease of formulation, and is widely used in pharmaceuticals, food, and health supplements. In 2024, the production of caffeine anhydrous powder was 55,000 tons, with an average price of 16,000 USD per ton. The caffeine anhydrous powder industry chain is led upstream by coffee bean and tea leaf traders such as Louis Dreyfus Company, ECOM, and Mitsui & Co., Ltd; the midstream consists of caffeine extraction and refining; downstream applications include food and beverages, pharmaceuticals, and health supplements, represented by Coca-Cola, Pfizer, and Amway. In 2024, the annual production capacity per line was about 3,000 tons, with an average gross margin of approximately 51%. The market outlook for caffeine anhydrous powder is highly positive, driven by the rise of health-conscious consumption and growing demand for functional foods. With increasing needs for sports nutrition, energy drinks, and pharmaceutical formulations, the dependence on high-purity and stable raw materials continues to grow. In the coming years, this sector is expected to maintain steady growth under the global trend of health and energy supplementation, achieving higher market penetration, attracting more players, and fostering technological improvements and product diversification.
