Abstracts

Cake oil is generally referred to as SP or SP cake oil. SP is derived from the first letter of the English word "Sponge Cake" for sponge cake, and in China, this type of product is not only referred to as SP. The biggest feature of SP is its high efficiency in initiating. By using SP with high efficiency and a simple one-step operation method, the manufacturing time of batter can be shortened and the stability of manufacturing can be achieved. Ultimately, it can make the industrialization and large-scale stable production of cakes possible. Cake oil, also known as cake emulsifier or cake foaming agent, is a semi transparent paste and belongs to the category of surfactants. It has dual functions of foaming and emulsifying. As a foaming agent, it can maintain the stability of the foam system and make the cake have a dense and loose structure; As an emulsifier, it can maintain the stability of oil and water, making their structure uniform and delicate. Directly adding it to the batter of cake and small pastry egg making method and stirring together can improve emulsification stability, enhance the mesh structure of gluten, retain moisture, prevent aging, and increase the softness of the product.
