Abstracts

Calcium aluminate is a compound composed of calcium oxide (CaO) and aluminum oxide (Al₂O₃). It is commonly used in various industries, including construction, ceramics, refractories, and metallurgy. The compound is produced by heating calcium carbonate (CaCO₃) and aluminum oxide to high temperatures. Calcium aluminate has excellent heat resistance, chemical stability, and refractory properties, making it useful in cement production, where it acts as an additive to improve the properties of cement, such as setting time, strength, and resistance to high temperatures. In refractories, calcium aluminate is utilized in the manufacture of furnace linings, casting molds, and other high-temperature applications. The industry trend for calcium aluminate reflects steady growth and demand, particularly in the construction and refractories sectors. In the construction industry, calcium aluminate cement (CAC) is gaining popularity due to its unique properties, such as rapid setting, high early strength, and resistance to acidic environments. CAC is commonly used in applications where fast-setting is required, such as in industrial flooring, sewer infrastructure, and repair mortars. Additionally, with the increasing focus on sustainable construction materials, calcium aluminate-based products are gaining attention as they are able to reduce the carbon footprint and contribute to more environmentally friendly building practices. In the refractories industry, calcium aluminate is witnessing a rising trend for its ability to withstand high temperatures and improve the performance and durability of refractory materials used in furnaces, kilns, and other high-heat applications. Overall, the industry trend for calcium aluminate indicates continued growth driven by the construction industry's need for specialized cement and the refractories industry's demand for high-performance materials.

The global Calcium Aluminate market size was estimated at USD 1566.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the

forecast period.
