Abstracts

Calcium hydrogen sulfite, a chemical compound with the formula $\text{Ca}(\text{HSO}_3)_2$, is primarily used as a reducing agent, bleaching agent, and preservative across multiple industrial sectors, with its largest applications found in the pulp and paper industry for sulfite pulping and as a chlorine alternative in bleaching processes, as well as in water treatment for dechlorination and in the food industry as an antimicrobial and antioxidant agent to prevent spoilage and discoloration. The market is characterized by steady demand driven by its cost-effectiveness and functional versatility, though it faces competition from alternative chemicals like sodium-based sulfites and hydrogen peroxide, as well as regulatory pressures concerning sulfur dioxide emissions and food safety standards, which influence both production methods and application scope. Geographically, consumption is concentrated in regions with strong industrial manufacturing bases, particularly North America, Europe, and Asia-Pacific, where pulp production and water treatment activities are prominent, while growth is tempered in mature markets but shows potential in emerging economies with expanding industrial and environmental infrastructure needs.

The global Calcium Hydrogen Sulfite market size was estimated at USD 250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
