Abstracts

Calcium iron cored wire is also called calcium iron alloy cored wire, which is an alloy cored wire made by mixing metal calcium with a certain proportion of iron powder and covering it with a steel strip. The calcium-iron cored wire consists of a mixture of 28%-35% calcium particles and 65%-72% iron powder as the core material, and the inner core is wrapped with a cold-rolled low-carbon steel strip as the sheath. As major iron and steel companies have strict requirements on the form and quantity of low carbon steel, ultra-low carbon steel, low silicon steel, and their inclusions, calcium iron cored wire is generally selected for calcium treatment of pure steel.

The global Calcium Iron Cored Wire market size was estimated at USD 182.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.70% during the forecast period.
